QUESTION: Which of the following functions of time represent (a) simple harmonic, (b) periodic but not simple harmonic, and (c) non-periodic motion? Give period for each case of periodic motion (ω is any positive constant):

1) $\sin(\omega t) - \cos(\omega t)$

2) $\sin^3(\omega t)$

3) $3\cos\left(\frac{\pi}{4} - 2\omega t\right)$

4) $\cos(\omega t) + \cos(3\omega t) + \cos(5\omega t)$

5) $\exp\left(-\omega^2 t^2\right)$

6) $1 + \omega t + \omega^2 t^2$

Solution: :

1) Periodic function:

$$x(t + T) = x(t) \quad \forall x \in \mathbb{R} \tag{1}$$

where min T s.t $T > 0$ is time period

2) SHM:
   For a function to be in shm it must satisfy

$$\frac{d^2 x(t)}{dt^2} = -(2\pi f_0)^2 x(t) \tag{2}$$

Variable	Description	formula
$x(t)$	Displacemen wrt mean position	none
ω	Angular frequncy	$2\pi f$
T	Time period	$\frac{1}{f}$
ϕ	phase angle	none

TABLE 0

INPUT PARAMETERS

1) $\sin(2\pi ft) - \cos(2\pi ft)$
   The function can be rewritten as:

$$= \sin(2\pi ft) - \sin\left(\frac{\pi}{2} - 2\pi ft\right) \tag{3}$$

$$= 2\cos\left(\frac{\pi}{4}\right)\sin\left(2\pi ft - \frac{\pi}{4}\right) \tag{4}$$

$$= \sqrt{2}\sin\left(2\pi ft - \frac{\pi}{4}\right) \tag{5}$$

$$\frac{d^2(\sin(2\pi ft) - \cos(2\pi ft))}{dt^2} = -(2\pi f)^2(\sin(2\pi ft) - \cos(2\pi ft)) \tag{6}$$

$$\frac{d^2x(t)}{dt^2} = -(2\pi f)^2 x(t) \tag{7}$$

$$\tag{8}$$

$\therefore$ SHM, T is $\frac{1}{f}$ and ϕ is $\left(\frac{-\pi}{4}\right)$ or $\left(\frac{7\pi}{4}\right)$

$$\sin\left(2\pi f\left(t + \frac{1}{f}\right)\right) - \cos\left(2\pi f\left(t + \frac{1}{f}\right)\right) = \sin(2\pi ft) - \cos(2\pi ft) \tag{9}$$

Graph of function is shown in (Fig. 1)

(3) $3\cos\left(\frac{\pi}{4} - 4\pi ft\right)$

This function can be rewritten as

$$= 3\cos\left(4\pi ft - \frac{\pi}{4}\right) \tag{10}$$

$$\frac{d^2\left(3\cos\left(\frac{\pi}{4} - 4\pi ft\right)\right)}{dt^2} = -3(4\pi f)^2\left(\cos\frac{\pi}{4} - 4\pi ft\right) \tag{11}$$

$$\frac{d^2x(t)}{dt^2} = -(4\pi f)^2 x(t) \tag{12}$$

$\therefore$ SHM, T is $\frac{1}{2f}$ and ϕ is $\left(\frac{-\pi}{4}\right) or \left(\frac{7\pi}{4}\right)$

$$3\cos\left(\frac{\pi}{4} - 4\pi f\left(t + \frac{1}{2f}\right)\right) = 3\cos\left(\frac{\pi}{4} - 4\pi ft\right) \tag{13}$$

$$\tag{14}$$

Graph of function is shown in (Fig. 1)

(4) $\cos(2\pi ft) + \cos(6\pi ft) + \cos(10\pi ft)$

This function can be rewritten as

$$= \cos(2\pi ft) + \cos(10\pi ft) + \cos(6\pi ft) \tag{15}$$

$$= 2\cos\left(\frac{2\pi ft + 10\pi ft}{2}\right)\cos\left(\frac{10\pi ft - 2\pi ft}{2}\right) + \cos(6\pi ft) \tag{16}$$

$$= 2\cos(6\pi ft)\cos(2\pi ft) + \cos(6\pi ft) \tag{17}$$

$$= \cos(6\pi ft)(1 + 2\cos(2\pi ft)) \tag{18}$$

$$\frac{d^2\cos(2\pi ft) + \cos(6\pi ft) + \cos(10\pi ft)}{dt^2} = (2\pi f)^2\cos(2\pi ft) + (6\pi f)^2\cos(6\pi ft) + (10\pi f)^2\cos(10\pi ft) \tag{19}$$

$$\frac{d^2x(t)}{dt^2} \neq -(2\pi f)^2 x(t) \tag{20}$$

Period of $\cos(6\pi ft)$ is $\frac{1}{3f}$
Period of $1 + 2\cos(2\pi ft)$ is $\frac{1}{f}$
Lcm is $\frac{1}{f}$
$\therefore$ SHM,T is $\frac{1}{f}$

$$\cos\left(2\pi f\left(t + \frac{1}{f}\right)\right) + \cos\left(6\pi f\left(t + \frac{1}{f}\right)\right) + \cos\left(10\pi f\left(t + \frac{1}{f}\right)\right) = \cos(2\pi ft) + \cos(6\pi ft) + \cos(10\pi ft) \tag{21}$$

Graph of function is shown in (Fig. 1)

(5) $\exp\left(-(2\pi f)^2 t^2\right)$

$$\text{As } T \to \infty \tag{22}$$

$$\exp\left(-(2\pi f)^2 t^2\right) \to \infty \tag{23}$$

$$\frac{d^2(\exp\left(-(2\pi f)^2 t^2\right)))}{dt^2} = 2(2\pi ft)^2\exp\left(-(2\pi f)^2 t^2\right) + 2(2\pi ft)^4\exp\left(-(2\pi f)^2 t^2\right) \tag{24}$$

$$\frac{d^2x(t)}{dt^2} \neq -(2\pi f)^2 x(t) \tag{25}$$

$\therefore$ This never repeats and non periodic
Graph of function is shown in (Fig. 1)

(6) $1 + 2\pi ft + (2\pi f)^2 t^2$

$$\text{As } T \to \infty \tag{26}$$

$$1 + 2\pi ft + (2\pi f)^2 t^2 \to \infty \tag{27}$$

$$\frac{d^2(1 + 2\pi ft + (2\pi f)^2 t^2)}{dt^2} = 2(2\pi f)^2 \tag{28}$$

$$\frac{d^2x(t)}{dt^2} \neq -(2\pi f)^2 x(t) \tag{29}$$

∴ This never repeats and non periodic

Graph of function is shown in (Fig. 1)
